- Our customers are basically showing quite nice interest towards our TIC -jaws (and cones). I believe there could be possibly pretty nice market for this product. Thus, I would like to make a contract with your company about the s for this product type in the Scandinavia (Finland, Sweden and Norway). Currently we are making quite a big effort to get this product known and established at our area, and it would feel pretty wrong if some other would then cash-out the advantage from this work.

Because this customer is a trader, we do not get more information from him. So just share what we had got.
